Mean 49.482; Variance 97.811; scale 0.506 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Result No. Score 10. 2834 3 2249 4 4 2096 6 1815 7 1890 6 1815 11 323 124 11 323 11 323 11 323 11 228 11 323 124 125 125 126 20 261 21 266

Mitochondrial and nonmitochondrial citrate synthases in
Saccharomyces cerevisiae are encoded by distinct homologous
Ferea, T.; Contreras, E.T.; Oung, T.; Bowman, E.J.; Bowman,
                        #journal Mol. Genet. (1994) 242:105-110
#title Characterization of the cit-1 gene from Neurospora crassa encoding the mitochondrial form of citrate synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      66 FRGFSIPECQKLLPAASAGAEPLPEGLLWLLLTGKVPSKEQVDALSADLRKRASIPDHVY 125

Cloning, sequencing, and expression of the gene for
NADH-sensitive citrate synthase of Pseudomonas aeruginosa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               citrate (si)-Synthase (EC 4.1.3.7) - Pseudomonas aeruginosa

Description: Perfect Score:

Sequence:

PAM 150 Gap 11 Scoring table:

77977 seqs, 28268293 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

swiss-prot37 1:swissprot Database:

Mean 50.720; Variance 85.362; scale 0.594 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 48.796; Variance 86.952; scale 0.561 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
